Subject: PFAS Company Policy Statement

Dear Valued Customer,

Poly- and perfluoroalkyl substances (PFAS) are a broad class of man-made carbon- and fluorine-based chemicals that have been used in a wide range of consumer and industrial applications due to their resistance to grease, oil, water, and heat. PFAS include substances such as PFOA, PFOS, and certain fluoropolymers including PTFE, FKM, and PVDF. Some PFAS have applications in electronic and industrial products, including wire insulation and protective coatings.

Tempco Electric Heater Corporation continually monitors regulatory, safety, health, and environmental requirements as part of our product stewardship and compliance programs. Tempco routinely reviews the material composition of its products and raw materials supplied by our vendors against applicable local, state, federal, and international regulatory requirements.

Tempco has reviewed our products along with raw materials from our suppliers. Based on these reviews, Tempco has determined that **many of our products do not contain intentionally added PFAS. Certain products may contain intentionally added PFAS, such as PTFE, where required for specific performance or application needs.** PFAS status is therefore assessed at the product or part-number level.

Please contact the undersigned if you have any questions. Thank you for your inquiry.

Samir Patel
VP of Engineering & Quality
Tempco Electric Heater Corporation
